Abstract:

The "GAME INFO" website is an online platform designed to provide sports enthusiasts with the latest updates and news from the world of sports. This website aims to keep users informed about a wide range of sports by offering match fixtures, team news, and in-depth coverage of ongoing tournaments.

The website's user interface is intuitive and user-friendly, featuring a design that ensures a seamless experience across various devices. It incorporates a visually appealing layout with eye-catching images, making it engaging and informative.

This project report outlines the development and design of the "SPORTS CORNER" website, emphasizing its structure, features, and the use of HTML, CSS, and JavaScript to create a dynamic and visually appealing sports news platform.

It delivers comprehensive and up-to-date information on a wide range of sports. It serves as a hub for sports enthusiasts, providing them with the latest news, match fixtures, team updates, and in-depth coverage of sporting events from around the world.

This website is a valuable resource for both casual sports enthusiasts and dedicated fans who want to stay informed about the latest developments in the sports world. With its engaging content, user-friendly interface, and commitment to delivering high-quality sports coverage, the website aims to foster a sense of community among sports fans.

Key features:

- **News and Updates:** Daily coverage of sports news, including match results, player performances, and team developments.
 - **Easy Navigation:** Easy navigation through the website's menu, offering sections for Home, Images, Team, News, Matches, About, and Contact.
- **Match Fixtures:** Detailed schedules of upcoming matches and tournaments, ensuring users never miss an important game.
 - **Team Profiles:** In-depth information about sports teams, their histories, and current rosters and eye-catching banners and images to highlight featured content.
- **Multisport Coverage:** Coverage of a variety of sports, from popular ones like football, cricket, and basketball to niche sports, ensuring a broad appeal to a diverse audience of sports fans.
- **Design:** A user-friendly design that adapts to different devices, allowing users to access content seamlessly on desktops, tablets, and mobile phones.

Technology Stack:

1. **HTML/CSS:** The foundation of web development. HTML is used for structuring the content, while CSS is used for styling and layout.
2. **JavaScript:** To add interactivity, dynamic content, and user experience enhancements.
3. **Utilizing CSS frameworks** to ensure the website looks and functions well on various devices and screen sizes and to fit well.

Methodolgy:

1. **Overall Structure:** It starts with the `<!DOCTYPE>` declaration and includes the `<html>`, `<head>`, and `<body>` sections.
2. **Metadata:** The metadata in the `<head>` section, including the character set, meta tags is for keywords, description, author, and links to icons and stylesheets.
3. **CSS and JavaScript:** In this code, there's a link to several CSS and JS files.
4. **Page Header:** The header section the site's logo, social media links, and a button for user enrollment. The links in the social icons and enrollment button will direct to respective pages.
5. **Navigation Menu:** The navigation menu is defined under the `<nav>` element. This menu includes links to various sections of the website.
6. **News Headlines:** The section with news headlines may use JavaScript to display headlines one by one. The content can be modified up to date by providing good backend (like database,etc)
7. **Fixtures:** This section appears to contain fixtures for matches. The team names, images, and fixture details are accurate.
8. **Accessibility:** The accessibility guidelines are prepared to make website usable for all users.
- 9.**Performance Optimization:** The website is optimized by minimizing file sizes, optimizing images, and reducing unnecessary requests.

THEORY RELATED TO THE HTML TAGS AND CSS USED IN THE PROJECT IMPLEMENTATION:

HTML (Hyper Text Markup Language):

1. `<section>`: This is an HTML5 element used to define sections or thematic grouping of content. It's often used to structure the page into different sections, making it more semantically meaningful.
2. `<div>`: The `<div>` element is a generic container used to group and style content. It is often used for layout and organizing elements on a webpage.
3. `<img>`: This tag is used to display images on a webpage. It includes the `src` attribute to specify the image file and the `alt` attribute for alternative text (important for accessibility).
4. `<h3>` and `<h4>`: These are heading elements used to define headers or titles of sections. They indicate the importance and hierarchy of the content.
5. `<aside>`: The `<aside>` element is typically used for content that is tangentially related to the content around it. It can be used for sidebars, pull quotes, and other secondary content.
6. `<ul>` and `<li>`: These tags are used to create unordered lists. `<ul>` represents the list itself, and `<li>` represents individual list items.
7. `<table>`, `<thead>`, `<tbody>`, `<tr>`, `<th>`, and `<td>`: These tags are used to create HTML tables. `<table>` defines the table, `<thead>` and `<tbody>` are used to group table rows in the header and body sections, `<tr>` defines table rows, and `<th>` and `<td>` are used for table headers and data cells, respectively.
8. `#`: This is used to specify the id attribute of elements, making it easier to target specific elements with CSS or JavaScript.

CSS (Cascading Style Sheets):

1. `<link>`: This is used to link external CSS stylesheets to the HTML document. In the code, it's used to link various CSS files, including Bootstrap and custom styles.
2. `.class-name`: This represents a CSS class selector. It's used to define and apply styles to elements with the specified class attribute.
3. `#id-name`: This represents a CSS ID selector. It's used to define and apply styles to a specific element with the specified id attribute.
4. `{ }`: Curly braces are used to enclose CSS style rules. Inside these braces, you define the styles that should be applied to the selected elements.

JavaScript:

1. `<script>`: The `<script>` tag is used to include JavaScript code within an HTML document. In your code, it's used to include the jQuery library and a custom JavaScript file (3dslider.js).
2. `src`: This attribute is used to specify the source (file path) of the JavaScript file to be included.
3. `<a>`: The `<a>` tag is used to create hyperlinks. In your code, it's used to link to external websites.
4. `href`: The `href` attribute is used to specify the URL or destination of the hyperlink.
5. `<i>`: This tag is often used to create icons or decorative elements. In your code, it's used with Font Awesome icons.

This code combines HTML for structuring content, CSS for styling, and JavaScript for interactivity and behavior to create a web page with various components and features.

Web Pages with explanation:

1. Home Page (`index.html`):

The home page is the main entry point of your sports website. It typically provides an overview of the site's content and offers users quick access to various sections and features.

Components:

- A navigation menu to explore different sections of the website.
- A carousel (image slider) displaying key messages or featured content.
- Top headlines or news updates.
- Images or banners related to recent events.

2. Images Page (`about.html`):

The "Images" page is dedicated to displaying images related to sports events, teams, or players.

Components:

- A gallery or grid layout displaying sports-related images.
- Descriptions or captions for each image.
- Possibly, options for users to filter or sort images based on categories or events.

3. Team Page (`team.html`):

The "Team" page is likely focused on providing information about sports teams, such as team members, statistics, and achievements.

Components:

- Team logos or images.
- A list of team members with their names, positions, and images.
- Statistics or records for the team, if applicable.
- Team achievements and history.

4. News Page (`news.html`):

The "News" page is where users can find the latest updates and articles related to sports news.

Components:

- A list of news articles with titles, publication dates, and brief descriptions.
- Possibly, filters or categories for different types of news (e.g., match reports, player interviews).
- Links to full articles or details.

5. Match Page (`match`):

Purpose: The "Match" page seems to be focused on providing information about upcoming sports matches or events.

Components:

- Details and images related to upcoming matches.
- A carousel or slider showcasing featured matches.
- Links to match details, venues, and ticket information.
- Information about rescheduled matches or event updates.

6. About Page :

Purpose: The "About" page is likely an external link leading to more information about a specific topic. In your code, it links to a page related to Cricbuzz(sample page).

Components:

- Content and information about the linked topic (in this case, Cricbuzz).
- May include details about the organization, its history, and services.

7. Contact Page (External Link):

Purpose: The "Contact" page is another external link that provides users with a way to get in touch with the website's administrators or support team.

Components

- Contact information, such as email addresses or forms for inquiries.
- Possibly, a location or office address.

Chelsea FC beats Manchester FC in the thriller,Advances to finals

21 SEPT 2023
FIFA 2026 To be held in Canada,United states of America and Mexico

Conclusion:

In the analysis of the HTML, CSS, and JavaScript code for the sports website, I have identified the key elements and their respective functions. This code combines various technologies to create a well-structured and visually appealing webpage.

key takeaways:

- The HTML code provides the structural foundation of the webpage, defining sections, headings, images, lists, and tables. It organizes the content in a semantically meaningful way, making it more accessible and understandable.
- CSS is employed to style and format the content. The code includes references to external CSS files. CSS classes and IDs are utilized to apply styles to specific elements, contributing to the visual appeal and layout of the webpage.
- JavaScript is used to enhance interactivity and functionality. The code incorporates jQuery, a popular JavaScript library, to enable dynamic features. Additionally, a custom JavaScript file, '3dslider.js,' is included to handle specific behaviors such as image sliders and navigation links.

I have learnt of how to include several libraries of java script which provide exceptional features to the website. Developing this website is a very good learning experience for me.
